

ymp TUI – chat-first

Главный экран – разговор, не дашборд: один транскрипт, строка ввода внизу, тонкая шапка, статусная строка. Всё остальное – полноэкранные страницы данных в духе k9s (по `:`, `Esc` назад) и немногочисленные модальности решений. Композиция **прошлого артефакта** отброшена; тема, палитра, статусные цвета и шрифт – прежние. Планы помечаются текстом всегда: `ctrl` · `collab` · `verif`; каждое различие состояния живёт и без цвета. Фикстуры детерминированы: проект `aspe-payments`, интент `it-03`, контракт `tc-07`, ран `rn-2209`, участник `pt-01`, кандидаты `cd-31/cd-32`.

Формы записей транскрипта

Шесть форм. Записи борды (`collab`) прилетят позже – форма уже зарезервирована и не потребует перевёрстки: участник ▶ тип сообщения, данные инертны – ничто в транскрипте не исполняется одной клавишей. Типы: `proposal`, `question`, `hypothesis`, `observation`, `constraint`, `dead_end`, `challenge`, `confirmation`, `decision`, `help_request`.

tc-07 draft · no run

> you Add idempotency keys to the payments POST API

ymp intent it-03 recorded → ev-0009 · drafting contract package tc-07 ...

ymp interview 1/4 · scope

Which endpoints must honor the Idempotency-Key header? openapi.yaml declares three mutating routes; only POST /payments matches the intent literally.

- 1 POST /payments only
- 2 POST /payments and POST /refunds
- 3 every mutating endpoint

a number, or describe the scope in your own words

> you 2 — refunds reuse the same key namespace

ymp interview 2/4 · replay semantics

A replayed request carries the same Idempotency-Key but a different body. The draft answers 409 conflict without touching payment state: treating it as a new payment would double-charge, and silently returning the first result would hide a client bug. Accept 409, or specify different behavior?

> you 409 is right

ymp interview 3/4 · retention

How long must a key remain replayable after first use?
a duration, e.g. 24h — becomes requirement R2 with a visible test

> 24h_

ho Handoff — переиспользуемые структуры

AppFrame	шапка 1 строка · тело · строка ввода · статусная строка; общая для транскрипта и страниц
TranscriptEntry	enum: Human · AppReply · AppError · RunEvent(plane) · BoardMsg(participant, type) · StructuredBlock общий префикс 7ch (метка) или 20ch (время+план); перенос — отступом продолжения
FieldRow	label · class · [value] · unit · default; состояния focused (инверсия) / invalid (x строкой ниже)
DataPage	breadcrumb(count) + маркер состояния · заголовки колонок · строки · fix-строка 4 · футер клавиш drop-порядок колонок объявлен страницей; счётчик cols -N в шапке
DescribeGroups	именованные группы key: value; ключи 14ch
DecisionModal	амбер-рамка · заголовок + пометка необратимости · тело · действие (может быть disabled) · Esc
TypedConfirm	ввод точного id; Enter активен только при полном совпадении
HelpOverlay	серая рамка · группы клавиш; ? и Esc закрывают
SizeGuard	required/observed · безопасный выход; рисуется вместо всего при <80×24
StateKind	loading · empty · stale · degraded · error — текстовый маркер в шапке поверхности
planes	ctrl(#8f8f8f) · collab(#d3872f) · verif(#8fbf5f) — всегда словом, цвет вторичен
